### TTX25 PRESSURIZED RACING CARTRIDGE KIT

*Straight from Öhlins vast MotoGP-experience, the new TTX25 pressurized cartridge kit is the thing to have for riders with high demands. Designed for high-end top level racing in SuperStock and SuperSport classes, this new cartridge kit will give you loads of performance.*

The TTX25 cartridge kit maintains damping at higher frequency, which improves the control of tyre vibrations. The improved dynamic behaviour, due to the pressurized system, results in a more controlled movement. It also improves the response time of the damping force build-up after each change of direction, noticed for the rider as an improvement of the tyre contact feel.

As an advanced product born and raised on the GP tracks, now available for every rider, this high-end TTX25 pressurized cartridge kit requires regular maintenance by qualified staff to perform at the highest level race after race.

#### FEATURES

- External rebound, compression and spring pre-load adjusters
- Easy to change settings for individual preferences
- Wide range of option spring rates available to suit every rider's personal preferences for each track.
