## MX & ENDURO 48MM AFTERMARKET MX FRONT FORK

*The new 48 mm aftermarket front fork for 2012 from Öhlins comes loaded with the very latest TTX22 cartridge kit inside.*

We build on the success from last year and further improve the 48 mm front fork. Improvements for 2012 include the new improved 2012 cartridge kit. This new cartridge kit has an overall better main piston performance due to new springs fitted.

An improved and better seal means less fading when riding and we have changed the top-out rubber to minimize the risk for top-out noise. One big improvement is the redesigned check-valve unit which makes the fork stay up in stroke without feeling too hard. This further improves the overall performance of the new front fork.

As before the cartridge kit is surrounded by a 48 mm DLC coated inertube and new outer tubes.

*All in all these improvements add to world class performance and brings your bike to top level racing performance.*

### FEATURES
