

RACING TTX36 MKII

The TTX36 has brought bikes and riders to the podium and to the winners circle many times and has been an obvious choice for winners' bikes. Now the latest experience from MotoGP and WSBK can be on your bike too. For 2012 this successful shock absorber is released in a MKII version.

The dynamic behavior is improved thanks to reinforced tubes, new piston and piston bands. Check valves are improved in terms of opening force and closing forces and each and every part has been under the sharp eye of our engineers.

The result is a shock absorber with the latest developments from Öhlins, all learned from experience in MotoGP and WSBK.

FEATURES

- TTX-technology – no cavitation risk!
- Improved traction and grip
- Less hysteresis, improved dynamics of the shock absorber
- Better ground contact feel
- Integrated hydraulic preload adjuster (if it fits on the bike geometry)
- New design of the adjuster housing
- Wide adjuster range
- Completely separated functions for rebound and compression damping
- All adjustments are done on the cylinder head of the shock absorber
